# Division 22 | Plumbing Hydration Stations

#### **General Notes**

A remote cooler is required for chilled water dispensing and a drainage system is required for waste water.

Coordinate appropriate wall depth and location for remote chiller.

The top of the hydration station access door must be sloped.

#### **Installation Notes**

Drain grilles must be securely fastened with tamper-resistant fasteners. Integral cup dispensers must be securely fastened to the filling station housing.

## Willoughby Industries, Inc.

www.willoughby-ind.com

# WBDF-1519-HC Drinking Fountain with Shroud

#### Notes:

 Provide tamper-resistant sealant at joint between underside of lavatory and top edge of shroud where needed.

#### Cautions:

- Bubbler and Perforated drainage holes allow for wedging opportunities.
- A difficult but possible ligature opportunity may exist with this product. A series of shoelaces tied together may be looped over the drinking fountain and pulled back toward the support wall under the shroud.

# Division 22 | Plumbing Hydration Stations

#### **General Notes**

Generally, ceiling mounted diffusers and grilles are more resistant to tampering, while wall-mounted elements provide more structural support for heavy and deep correction-grade assemblies.

#### **Diffusers & Grilles**

The selection of diffusers and grilles must be carefully considered in light of all relevant patient risk criteria, mechanical performance requirements, and the installed substrate. Louver and grille opening size and spacing is a critical consideration for structural performance, air flow and ligature resistance. The most secure and ligature-resistant assemblies are typically very heavy, requiring careful consideration for structural support and the sequence of construction.

The selection of radiator covers must be carefully considered with respect to all relevant patient risk criteria, mechanical performance requirements, and the installed substrate. Perforated radiator covers pose a particular risk as they can be looped by a thin shoelace or similar object. Because these enclosures are typically surface-mounted, careful consideration must be given to the installation conditions at these covers to prevent wedging/looping opportunities at the installed substrate. Tamper-resistant sealant should be utilized to close all gaps at perimeter of enclosure.

Diffusers and grilles should be securely mounted in place using tamper-resistant fasteners. Diffusers and grilles, and all accessible elements of the housing should be attached to permanently affixed concealed back angles that are part of the assembly, or to wall or ceiling framing elements. Because of the inherent variations in the manufacturing process, specifiers should procure samples of diffusers prior to specifying. Variations in finish along with manufacturing tolerances have caused unsafe installations in some products where other instances of the same line have achieved safe installations.

It should be noted that all ligature-resistant diffusers and grilles reduce air flow. Evaluation of this reduction shall be performed prior to incorporation/replacement of these diffusers and grilles.

#### **Escape**

Where escape is a primary risk criterion, diffusers and grilles should be reduced in size to the greatest extent possible. If diffusers and grilles are required to be large enough to allow passage, they should be securely mounted in place using welded joints and/or tamper-resistant fasteners. Diffusers and grilles, and all accessible elements of the housing should be attached to wall or ceiling framing elements and to the ductwork. Face plate construction should be thick enough to resist impact assaults and should not be removable, except with special tamper-resistant fastener tools. Passage restrictors should be permanently welded in the sleeve housing within the assemblies.

#### **Ligature Resistance**

Where ligature resistance is a primary risk criterion, diffusers and grilles should be specifically designed with closely spaced welded deep "S" and "Z" shaped vanes that prevent looping, or they should be protected by heavy gauge metal face plates with small, tightly spaced, perforated holes. Perforated grilles with 11 ga. (1/8" thick) face plates with holes no larger than 1/8" in diameter on 3/16" staggered centers have been tested and tend to resist looping, however all perforated grilles should be reviewed prior to specification/installation as manufacturing tolerances and fabrication errors may result in conditions that allow looping.

Perforated diffusers, grilles and radiator covers utilizing the industry standard of 3/16" hole on 9/32" spacing pose a particular risk as they can be easily looped by a thin shoelace or similar object. Because these devices are prevalent in existing inpatient environments, they are identified in this document as ACCEPTED in medium risk environments and noted with specific USE WITH CAUTION language. It should be noted that smaller holes and tighter spacing of holes, and heavier gauge metal plate are also available from several manufacturers as standard options. OMH will continue to perform additional testing on perforated grilles and diffusers and is researching alternative solutions. The risk of utilizing these devices shall be noted and evaluated by each facility.

#### **Concealing Contraband**

Where concealing contraband is a primary risk criterion, diffusers and grilles should be reduced in size to the greatest extent possible and securely mounted in place using tamper-resistant fasteners. Diffusers and grilles, and all accessible elements of the housing should be attached to wall or ceiling framing elements. Face plate construction should be thick enough to resist impact assaults and should not be removable, except with special tamper-resistant fastener tools.

#### **Additional Information**

CO2 sensors are not currently available in any ligature-resistant form and should only be used where accessible to patients in low or medium risk areas. CO2 sensors may be installed within ducts in high risk areas, but this will not qualify for the USGBC's LEED credits for high occupancy mechanically ventilated spaces.

# **General Notes**

The products listed in this section have been tested for patient safety on the patient accessible side only. Any concealed features of the products are incidental, and should not be assumed as "Accepted."

Perforated grilles and radiator covers utilizing the industry standard of 3/16" holes on 9/32" spacing are easily looped and may pose a ligature risk. Perforation patterns of 1/8" at 3/16" centers have been shown to resist looping but do not entirely eliminate this risk. The specifier must carefully review these products to determine whether the inherent risk of perforated products is appropriate for use prior to specification.

#### **Installation Notes**

Careful detailing of diffusers and grilles with substrate is required.

Some of the diffusers included in this document have several options for mounting, installation, and overall configuration. Several of the mounting options may limit access resulting in inaccessible ductwork for cleaning and maintenance. The specifier must carefully review these conditions with owner's representative and maintenance personnel prior to specification and installation.

#### Performance Criteria

The configuration of ligature-resistant grilles may offer significantly less free area than similarly-sized standard commercial grilles. Engineers shall size grilles appropriately to achieve the required free area.

#### **Finish**

The metal finish of perforated and bladed grilles affects their ligature-resistance. Specify a powder-coated paint finish.

# **Division 26 | Electrical** Receptacles & Cover Plates, General

#### **General Notes**

Provide hospital grade, tamper-resistant receptacles with arc fault and ground fault interruption in all patient accessible areas of all psychiatric hospitals. When it is not feasible to provide dual protection at the receptacle location, provide dual protection circuit breakers for all circuits with devices in patient accessible areas. See descriptions below for details.

In new construction or substantial renovations, where arc fault and ground fault interruption are both provided at the receptacle, provide electrical cover plates that are either thermoplastic nylon or metal. In minor renovation projects, where providing arc fault and ground fault interruption are beyond the scope of the project, provide only metal electrical cover plates. In all cases, fasten cover plates to receptacle with tamper-resistant fasteners that are accepted in the NYS-OMH Patient Safety Standards. Two fasteners are recommended, though not required, for all cover plates.

#### **Hospital Grade Receptacles**

Hospital grade receptacles are on emergency circuits and receive back-up power from a generator. Review applicable codes to identify areas Hospital Grade Receptacles are required.

#### **Tamper-resistant Receptacles**

Tamper-resistant receptacles feature built in safety shutters that block foreign objects from being inserted into the receptacle. Shutters remain closed if an object is inserted into one side of the receptacle. The shutters open only when a two bladed or grounded plug is inserted. Excessive tampering may compromise the receptacle.

Provide tamper-resistant receptacles with arc fault and ground fault interruption in all patient accessible areas of all psychiatric hospitals.

### **AFCI (Arc Fault Circuit Interrupter) Protection**

AFCI protection guards against damage or fires which can result from arcing and sparking that can arise from deteriorated wires, poor connections and breaches in wire insulation. Arc fault self-harm can be induced by holding two insulated conductors (e.g. paper clips while holding them in flexible plastic or rubber as an insulator) and bending them close enough together to get an electrical current to arc between them, perhaps in an effort to create a cigarette lighter or start a fire.

### **GFCI (Ground Fault Circuit Interrupter) Protection**

GFCI protection guards against ground faults, and are an effective means of preventing electrical shocks. Ground fault self-harm can be induced by grounding oneself (e.g. to the floor) while holding one conductor (i.e., paper clips) in the hot side of the receptacle, causing the electrical current to flow through oneself to the ground.

# Division 26 | Electrical Receptacles & GFCI/AFCI Circuit Breakers

See comments on previous general notes page.

Provide tamper-resistant receptacles with arc fault and ground fault interruption in all patient accessible areas of all psychiatric hospitals.

Provide dual protection circuit breakers for all circuits with devices in patient accessible areas when it is not feasible to provide dual protection at the receptacle location.

Circuit breakers are located within secure electrical panels outside of the patient environment. They are included in this document because they enhance the patient safety of the built environment.

# Division 26 | Electrical Wall Plates

#### **General Notes**

Thermoplastic nylon wall plates are recommended. They are more flexible than thermoset (urea) products and have a shinier, glossy finish. Molded thermoplastic nylon wall plates also perform for maximum resistance to impact, abrasion, fading and discoloration. Nylon is resistant to stresses associated with high abuse applications.

Nylon is pliable so it should be installed in a bed of tamper resistant sealant.

HIGH

RISK AREAS

# Division 26 | Electrical Light Fixtures, General

#### **Performance Criteria**

Provide lighting that meets the following criteria:

- Lighting: High efficiency, maintaining visual performance where applicable. Provide dimmable ballasts as required.
- Lamps: NYS-OMH standard is LED due to its high efficiency, performance, reliability, and cost effectiveness.
- Diffuser|Lens: Provide 1/8" thick minimum polycarbonate prismatic or translucent lens. Lens frame requires enough edge bite in order to retain the lens during maximum deflection.
- Housing: Durable and indestructible.
- Exposed Fasteners: To be tamper-resistant with finish to match housing.
- Maintenance: Specify fixtures with standard replacement parts, lamps and ballasts. Consider the minimum number of security fasteners required for patient safety.
- Approvals: Underwriters Laboratories (UL) and others as applicable.

#### **Installation Notes**

Install light fixtures flush with substrate. It is critical to ensure there are no gaps. Any remaining gaps shall be filled with tamper-resistant sealant.

Coordinate lighting fixture specifications with new/existing ceiling substrate prior to ordering. When installing light fixtures into a medium or high risk ceiling system, it is imperative that the installation of the light fixture does not diminish the patient safety of the ceiling system as a whole. Therefore, it is recommend to mechanically fasten light fixtures to the ceiling system in order to maintain the appropriate level of patient safety at the ceiling plane.

The following properties identified in the product descriptions of each fixture included in this section were present in the sample tested for patient safety:

- Size
- Required specification options
- Mounting configuration
- Inner lens thickness
- Outer lens thickness
- Housing
- Finish

Altering any of these properties may impact patient safety and therefore warrants additional testing of a sample fixture for patient safety evaluation.

#### **Additional Notes**

Verify photometrics of light fixtures with polycarbonate lenses during the project design.

The Office of Mental Health Lighting Standards Handbook is intended for use by Plant Superintendents and Design Consultants as a reference guide when replacing light fixtures. The Handbook details which energy saving options may be best for each application. It is important to also reference the Office of Mental Health Patient Safety Standard Guidelines when replacing or specifying light fixtures in patient areas. OMH reinforces the importance of patient safety before energy efficiency in their facilities in all patient areas.

It is recommended to specify recessed wall clocks with polycarbonate lenses.

#### Primex Wireless www.primexwireless.com

#### **XR Digital Clock**

Compatible with Primex XR Series Transmitters providing wireless synchronized timekeeping. Specify GPS.

## Division 28 | Electronic Safety & Security

## Division 28 | Electronic Safety & Security Fire Alarm Components, General

#### **General Notes**

At this time, NYS-OMH is not aware of any patient-safe fire alarm components.

Device covers are susceptible to abuse and can be looped/weaponized. Careful consideration is required when specifying and locating devices associated with fire alarm and other electronic safety and security systems. It is therefore extremely important to locate these items in such a way to prevent patient access and interaction in high and medium risk areas.

Fire alarm notification devices are required to be ceiling mounted in high risk areas.

It is recommended that fire alarm notification devices be ceiling mounted in medium risk areas.
